

HARSHAK SAINI

Python Backend Developer | FastAPI · API Integrations · LLM Workflows
+91-9716791000 | harshaksaini@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Python Backend Developer with 2+ years of experience building scalable, high-concurrency backend systems and enterprise integrations. Skilled in FastAPI and REST/RPC API design, ETL and integrations (Shopify, Amazon, Xero, GitHub/GitLab, 3PL), Google BigQuery reporting, PostgreSQL optimization, LLM orchestration (LangChain, LangGraph, MCP) and cloud deployment on AWS.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript

Backend: FastAPI, Python ORM, REST/RPC APIs, Background Jobs, MVC, OOP, System Design

AI & LLMs: LangChain, LangGraph, Model Context Protocol (MCP), LLM application integration

Data: PostgreSQL, Google BigQuery, SQLite

Cloud & DevOps: AWS (EC2, S3, IAM), Nginx, Linux, Git, Postman

Concepts: Data Structures, OOP, System Design, MVC, Enterprise Workflows, Agile

Integrations: Shopify, Amazon, Xero, GitHub/GitLab, Facebook API, Google Drive API, 3PL APIs

WORK EXPERIENCE

Python Backend Developer — Target Integration

Aug 2024 – Present

- Designed and deployed an **ETL connector to Google BigQuery** moving client ERP data into the warehouse via scheduled, incremental loads with schema mapping, enabling automated reporting and analytics.
- Built and maintained **Shopify, Amazon and Xero connectors** using REST APIs, OAuth authentication and webhooks, with pagination, rate-limit handling and retry logic for reliable sync of orders, inventory and accounting data.
- Implemented **GitHub and GitLab sync** through their APIs to keep repositories consistent across teams and environments.
- Created **custom client dashboards** on top of BigQuery and PostgreSQL data, tailored to each client's business KPIs and reporting needs.
- Executed **major version upgrades** of client platforms, migrating custom modules, data models and API code to newer releases with regression testing.
- Delivered Facebook API, Google Drive API and 3PL logistics integrations; built **FastAPI REST APIs** with validated request/response schemas for external data exchange.
- Optimized PostgreSQL queries, indexes and ORM methods, **reducing API latency by 30%**.
- Deployed and maintained production applications on **AWS (EC2, S3, IAM)** behind Nginx on Linux, handling configuration, monitoring, backups and ongoing support.
- Built LLM-powered backend utilities using **LangChain, LangGraph and MCP** to orchestrate multi-step workflows and tool calling.

PROJECTS

HighScale Ticketing & Draw Engine

Python · PostgreSQL · React

- Architected a highly scalable backend processing **10+ lakh tickets daily** using Python background jobs and batch-optimized database writes.
- Tuned API controllers and **database indexing** to sustain low latency under heavy concurrent load.
- Automated winner-selection logic, ticket-processing workflows and analytics reports; built real-time admin monitoring dashboards.

Credit & Loan Lifecycle Platform

Python · PostgreSQL · Vue.js

- Engineered end-to-end mortgage and loan lifecycle services: **automated approvals, repayment schedule calculation and risk tracking**.
- Designed secure endpoints and asynchronous workflows for customer onboarding and credit application processing.
- Enforced **RBAC** access control and built dynamic document generation for internal operations teams.

LLM Workflow Orchestration Service

Python · FastAPI · LangChain · LangGraph · MCP

- Built a FastAPI service orchestrating multi-step LLM workflows with **LangGraph state graphs** and LangChain chains.
- Exposed internal business data and actions to LLMs as tools through **Model Context Protocol (MCP)** servers.

EDUCATION

B.Tech in Computer Science — Dronacharya College of Engineering

Batch: 2021 – 2025
